Scale Drawing Sheet

You can draw a diagram of your area below if you require a quotation for a full installation or if you are unsure of the quantity you require for self-installation

Artificial grass normally comes in rolls 4 metres wide, by any length up to around 25 metres. All rolls to be joined should lie in the same pile direction.

Scale: - We normally set each square to be 50cm x 50cm (a group of 4 squares would therefore represent 1 square metre), but use the best scale dependent on the size of your garden.
