

MAINTENANCE-FREE ARTIFICIAL GRASS

SCOTGREENS ARTIFICIAL GRASS FOR NURSERIES – HELPING TO KEEP KIDS SAFE, CLEAN, HAPPY AND HEALTHY

According to the National Day Nursery Association (NDNA), each nursery should have a "safe and clean outside play area".

Scotgreens provide and install play grass and shock pad systems, certified to both European and British safety standards, to nurseries as an alternative to natural grass, woodchip, bark and rubber surfaces. Bark, which can get very messy, can easily be replaced to create a clean, hygienic and safe environment for children. Safety is of paramount importance. Scotgreens materials allow for three different critical fall heights. The combination of artificial grass shock pads (where required) provides an attractive impact-absorbing surface, minimising the risk of injury to children and offering a splash of natural-grass colour at the same time.

Scotgreens offer products that replicate natural grass, providing all the aesthetic benefits with a minimal amount of maintenance and virtually no maintenance costs. The cost in terms of time and money to maintain natural grass can often be underestimated. An artificial surface removes the burden of mowing, watering, feeding, weeding and the application of pesticides.

- ALL-WEATHER SURFACES DRY OUT QUICKLY AND ALLOW KIDS OUTSIDE MORE OFTEN
- CHILDREN STAY CLEAN, MEANING LESS CLEANING-UP WORK FOR STAFF
- SHOCK PADS INSTALLED ONLY WHERE REQUIRED HELP TO ABSORB IMPACT AND KEEP CHILDREN SAFE
- COST-EFFECTIVE WHEN MEASURED AGAINST YEARS OF MAINTENANCE COSTS FOR NATURAL GRASS
- TOUGH, DURABLE SURFACES
- SOFTER PILE GRASSES FOR BABY AREAS, PROVIDING A TACTILE EXPERIENCE
- VERY LOW MAINTENANCE TIME & COSTS
- CHILDREN GET THE OPPORTUNITY FOR ADDITIONAL PHYSICAL EXERCISE AND ADVENTURE
